

D-Subminiature connectors with metal face.

D-Subminiature connector with metal face

A metal face forms the front of your D-Subminiature connector and shields high-frequency radiation that emanates principally from the point of external interconnection. These connectors also mate with traditional metal-faced D connectors.

CW metal faced D-Subminiature connectors are ideal for input/output applications and interconnecting electronic equipment. These connectors are designed to the applicable standards of Mil-DTL-24308 and are interchangeable and mateable with other connectors so designed.

Metal flange can minimize radiation at I/O ports

Metal face provides proper mate for other metal-faced D connectors
